

**Important advice to all students planning on taking the
(new) MCAT**

From the Department of Cell Biology & Neuroscience

As you may be aware, this year (2015) students will be taking a highly revised version of the MCAT exam. Please note: *the exam has changed significantly!!* Our faculty have analyzed the new exam extensively and determined which courses a student should take in order to be prepared for this exam. As a result, we ******strongly urge ****** you to take the following courses to have the background necessary to excel on the exam:

BIOH 185 - Integrated Physiology

BIOB 260 - Cellular and Molecular Biology

BIOH 313 - Neurophysiology

BIOH 320 - Biomedical Genetics

BIOH323 - Developmental Biology

BIOB 410- Immunology

You don't need to believe us!! Go to <https://www.aamc.org/students/services/343550/mcat2015.html> and download the entire exam content PDF for yourself. The concepts covered in these courses will appear on the MCAT and it's best if you understand them *before* encountering them for the first time on your MCAT exam!! Please feel free to speak to Lisa Musgrave or any of our CBN faculty should you have any concerns. **We are here to help you!**
