

ENGR 310

Lecture 9

11 Feb 2008

MONTANA
STATE UNIVERSITY

College of
ENGINEERING

Mountains & Minds

Announcements

- Assignment 2 due this week.
 - Turn in one-day prior to recitation
- Journal Check this week.
- Assignment 3 due next week.

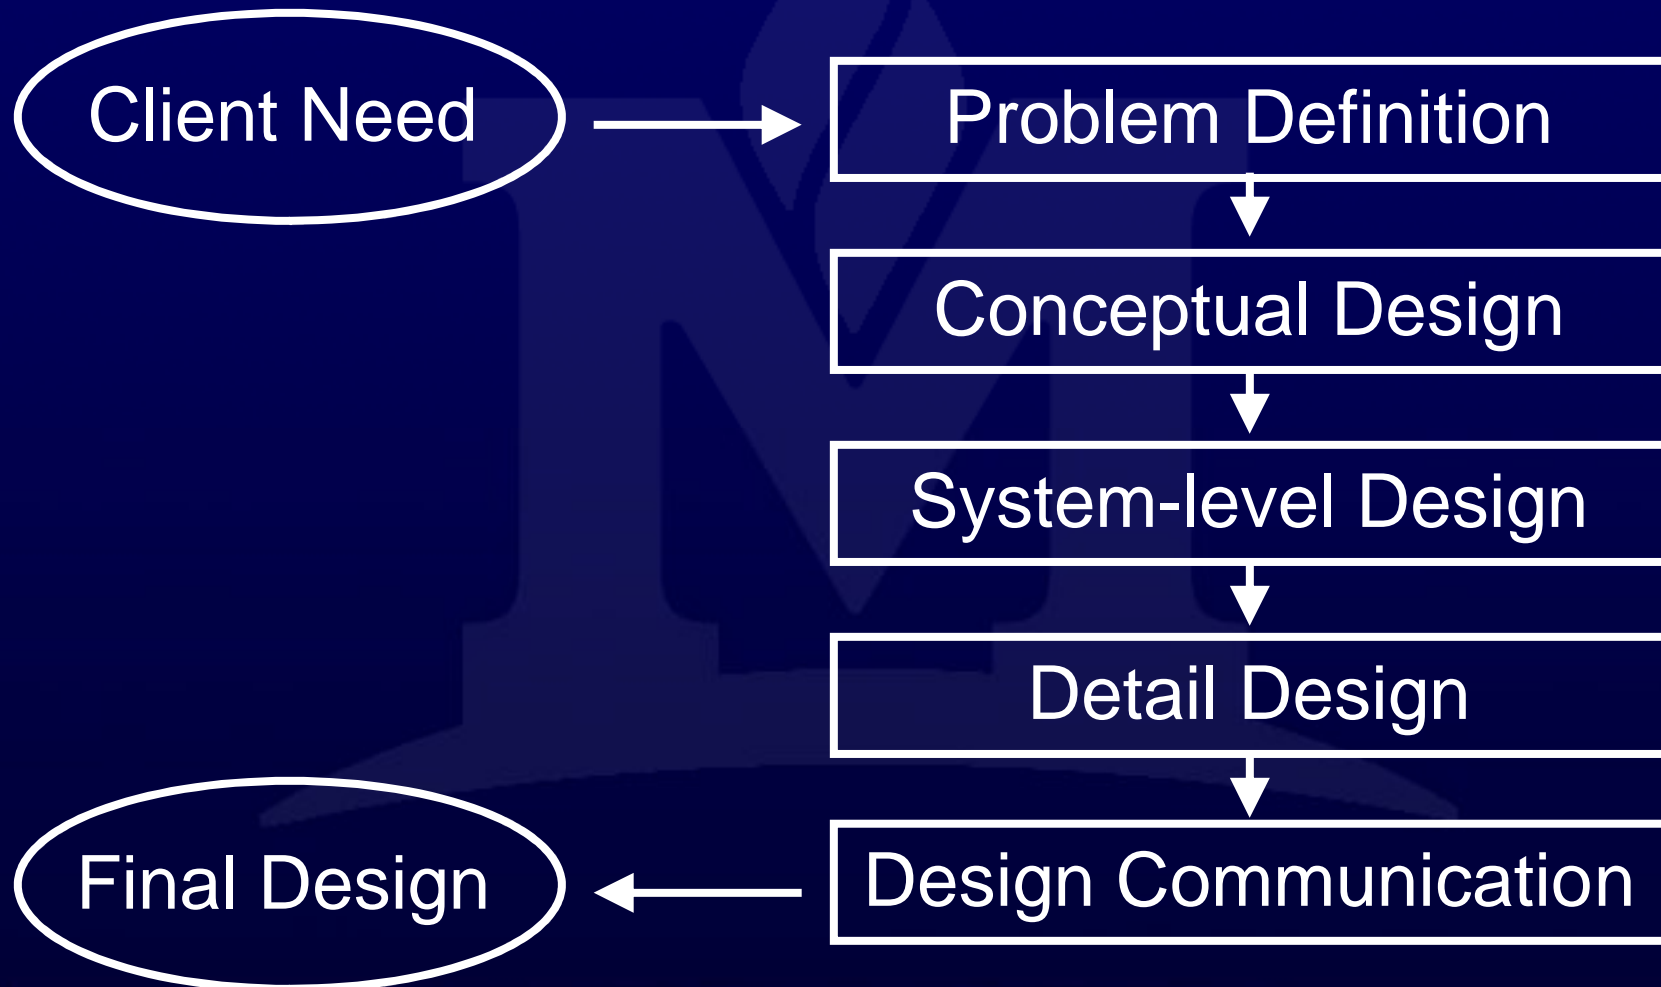

Last Time

- Teamwork success factors
- Stages of team development
- Effective meetings
- Managing conflict

An Engineering Design Process

client's statements

**Problem
Definition**

Gather information to develop a statement of client wants in engineering terms:

1. Clarify objectives
2. Establish user requirements
3. Identify Constraints
4. Define desired functions

statement of:

**objectives
constraints
requirements
functions**

Process Review

Gather Lots of Information:
Observation, Interviews, Research

List of Desired
Characteristics

List of Objectives

Objective Tree

Functions & Specifications

Functions = what system must do to achieve objectives

Functional Specifications = how well system must do it

Also called “performance specifications” or “functional requirements”

Black Box Approach

Black Box Approach

Inputs

Outputs

MONTANA

College of
ENGINEERING

Mountains & Minds

Divide Functions into Subfunctions

Tips

- Functions transform an input into an output.
- Define them as verb-object pairs.
 - E.g., convert energy, apply force, resist load
- Include primary and secondary functions.

Tips

- Functions transform an input into an output.
- Define them as verb-object pairs.
 - E.g., convert energy, apply force, resist load
- Include primary and secondary functions.

Unwanted

Required for
primary

Tips

- Functions transform an input into an output.
- Define them as verb-object pairs.
 - E.g., convert energy, apply force, resist load
- Include primary and secondary functions.
- Be as general as possible.
 - E.g., support books vs. support load

Example

Exercise

With a neighbor:

Create a **Functional Model** of an overhead projector.
