Enhancing Survival and Condition of First Feeding Larval Pallid Sturgeon Through Diet

Research Technician

<u>Duties:</u> Technician will assist with laboratory studies investigating the effects of diet on condition and survival of immediate post-hatch larval Pallid Sturgeon. Specific tasks will include, but are not limited to, assisting with set-up and maintenance of experimental systems, aiding in conducting experiments, and collecting data on larval condition and survival.

Qualifications: Applicants must currently be enrolled in an undergraduate program in fisheries science or related field, have interests in laboratory studies, have a keen eye for detail, possess strong organizational and problem solving skills, work well independently and in small groups, and be willing to work a Wednesday-Sunday schedule (days are non-negotiable).

Work Dates: May 15, 2020-August 15, 2020

<u>Duty Station:</u> The Research Technician will be hired through Montana State University, but the official duty station will be the Bozeman Fish Technology Center.

Salary: DOE

Last Date to Apply: COB February 28, 2020

<u>How to Apply:</u> Please submit 1) a letter of interest that addresses the above qualifications and any previous research experience (either in the field or in a lab); 2) a current resume or CV; 3) names and contact information for three (3) professional references. Electronic submissions are preferred.
