The EducationUSA Academy at Montana State University is a two week intensive and immersive summer program that allows international high school students (ages 15-18) to experience life at a US university, prepare for college applications, develop research and presentation skills, and enjoy some of the world's most adventurous landscapes and cultures. This year's program "STEM in the Greater Yellowstone Ecosystem" will introduce students to various STEM areas and allow for in-depth exploration alongside some of the world's leading researchers.

Instruction during the program will focus on writing a personal essay, developing public presentation skills, standardized test preparation, and improving collegiate level English. Through these courses along with interactive STEM workshops, students will have had the opportunity to:

- Learn more about STEM and their personal passions;
- Improve college level writing and produce a personal statement;
- Explore some of the world's most fascinating environments;
- Understand what makes successful research and how to get involved as an undergraduate;
- Develop public speaking skills and present at a public forum;
- Become more knowledgeable of standardized test preparation.

Date:

July 15 – 31,
2018

Cost:

\$ 4,200
