With the heavy winter snows, everyone is now dealing with flooding. While at MACRS 31st Conference, county road supervisors on Montana’s Highline said this was one of the toughest winters they ever had with snow accumulations and drifting. Several mentioned LTAP’s winter maintenance training and winter survival courses were extremely helpful.

While presenting at the MACRS conference on design of low volume roads, I referenced the smaller “Green Book,” Guidelines for Geometric Design of Very Low-Volume Local Roads (ADT ≤ 400). It is a valuable tool for those constructing and redesigning low volume roads.

In early April, I also spoke on Winter Maintenance issues at the Rocky Mountain Region 2011 Tribal/BIA Transportation Symposium in Bozeman, Montana.

The April Gravel Roads day-and-a-half courses I taught in Butte, Lewistown, and Miles City were well attended this spring. With more clients attaining their Roads Scholar Level 1 status, I was grateful to those scholars who assisted in these informative classes. Topics covered were gravel road design, drainage issues, materials, dust control, cattleguards, environmental concerns near wetlands, Dynamic Cone Pentrometer, and motor grader operation.

Our thanks to ARTBA trainer, Jerry Teeler, who provided a free OSHA Ten-Hour course in Billings with Montana LTAP as host. The twenty-five attendees received training on OSHA, work zones, PPE, collisions, night work, equipment and electrical safety. We are looking forward to hosting a similar safety session next year in Great Falls. It is partnerships like these that further our main focus on safety for all.

We provided flagging certification courses again in May with over 250 students being trained with new MUTCD work zone flagging requirements. Training was held at Havre, Great Falls, Lewistown, Billings, Lame Deer, and Bozeman. Due to the volume of calls requesting certification, these job opportunities to become a certified flagger are one way Montana LTAP adds to the workforce training and highway safety.

Please check out our calendar for classes and upcoming events in this newsletter and at our website: http://www.westerntransportationinstitute.org/centers/ltap/Training.

Travel safe this summer,
Steve Jenkins, Director

Local Technical Assistance Program

Our website lists upcoming training courses, registration forms, library information, our contact information, newsletters, various links, and MACRS information. Please go to: http://www.westerntransportationinstitute.org/centers/ltap/

The Local Technical Assistance Program/ Tribal Technical Assistance Program (LTAP/TTAP) is a nationwide network of 58 centers - one in every state, seven serving Native American tribal governments and one in Puerto Rico.

The LTAP/TTAP Mission is to foster a safe, efficient, and environmentally sound surface transportation system by improving skills and increasing knowledge of the transportation workforce and decision makers.
In March nearly 300 participants and vendors attended the MACRS 31st Annual Conference held in Great Falls, Montana.

“The support and turnout from our vendors was outstanding,” said MACRS President Wayne Buck, Rosebud County. “This conference offers vendors an opportunity to talk with participants from each of the 56 counties without traveling the entire state. It’s a definite win-win situation for everyone.”

The conference’s theme, “Stimulating Growth and Development of County Roads Through Positive Attitudes,” was indicative of the wide variety of presentations available for attendees.

The pre-conference speaker, Terry Fleck, The Attitude Doctor, reviewed the importance of having a positive attitude on the job, how to deal with employees with bad attitudes, and focusing on the values of attitudes.

As one of the keynote speakers also during general session, Fleck entertained the audience with his high-energy personality while outlining key aspects of maintaining a positive attitude.

USAF Brig Gen (SEL) Anthony Cotton, Commander of 341st Missile Wing, provided an enlightening presentation on missiles and missile roads to start out the first day of presentations.

Dr. Jill Hough, North Dakota State University, dealt with Ethics: what they are, what they look like, and how they are important in transportation. She noted that at the end of any given day to ask these questions:

- Did I do more good than harm today?
- Did I treat people with dignity and respect today?
- Was I fair and just today?
- Was my community better because I was in it?
- Was I better because I was in my community?

The afternoon sessions covered large truck engines and hybrid equipment. During the split session, participants had the choice of attending asphalt topics on crack sealing, patching, and chip seals; or finishing out their afternoon learning about the Montana Public Works Standard Specifications manual, low volume road design, and average daily traffic counts.

One Montana Public Works Standard Specifications manual (valued at $65) was given to each Montana county thanks to efforts by Eric Griffin, Lewis and Clark County, MACRS Executive Board, and Montana Contractors Association.

“It’s important that county road departments have the latest reference manuals to assist them in decision making,” noted Griffin. “This is a valuable tool they and their county commissioners will be able to use within the scope of construction.”

The second day started with Steve Monlux, Gravel Roads Consultant, and Russ Huotari, Richland County Public Works Director, reviewing alternate surfaces for gravel roads carrying heavy loads.

Continued on Page 4 . . .
With the oil boom back in full swing in eastern Montana, Huotari tried various surfacing methods on county roads to determine the most effective combination. These roads were not originally designed for extreme weight loads. Dust issues were another major concern. The next presentation covered Geo-Tech options for gravel roads.

The afternoon presentations included driver behavior and safety issues such as steps to reduce crashes:
1. Site Identification
2. Determine Crash Experience
3. Conduct a Field Visit
4. Identify Contributing Factors
5. Identify Appropriate Countermeasures
6. Assess and Select Countermeasures

The last session of the day focused on avoiding supervisor liability with Michele Puiggari, an attorney who works with MACo on various training issues. Puiggari outlined how to set goals in learning to identify personnel issues, how to apply that knowledge, and understand and act on supervisor responsibilities. In closing, she emphasized it is the supervisor’s responsibility when retaliation is suspected:

- Report to Human Resources
- Intervene to prevent others from retaliating
- Document file carefully with the business-related reasons as to why you requested employee to do something or you denied employee something
- Supervise the actions of coworkers

At the evening banquet, President Buck was assisted by his fellow officers and district representatives in distributing gifts from various counties to lucky patrons who had their names drawn from a basket. Roads Scholar Awards were presented by Montana LTAP Director Steve Jenkins. Ringling 5, musical entertainment, closed the evening activities.

President-Elect Mitch Urdahl urged all officers and district representatives at the Thursday morning business meeting to keep in contact with county supervisors and employees within their districts. Urdahl said it is important informing everyone with upcoming issues and training. He noted that next year’s conference will be at the Heritage Inn again in Great Falls, March 26 - 29, 2012. Urdahl looks forward to another great year for MACRS.

MACRS Officers & District Representatives 2011-2012
President: Mitch Urdahl, Gallatin County: 582-3250
1st Vice President: Tom Fairbank, Blaine County: 433-2407
2nd Vice President: Dave Sutton, Cascade County: 454-6912
Sec/Treasurer: Russ Huotari, Richland County: 433-2407
District #1: Ovila Byrd, Flathead County: 253-8688
District #2: Dave Fowler, Gallatin County: 582-3250
District #3: Sandra Broesder, Pondera County: 275-3156
District #4: Jerry Backlund, Custer County: 232-1970
District #5: Mo Henman, Yellowstone County: 256-6812
MACo Reps: Eric Griffin, Lewis & Clark County: 447-1636
Wayne Buck, Rosebud County: 346-2261

Carol T. Place, “The Trolley Lady,” took the MACRS Guests on a delightful tour to the Hutterite Colony and First Peoples Buffalo Jump. The second day the gals enjoyed making candy and tempering chocolate and tasting tea, topped off with antiquing in downtown Great Falls. Thanks to Great West Engineering for sponsoring this event!
The Roads Scholar Program, started back in 2001, has continued to gain recognition as a viable method of honoring those employees attending safety training and advancing themselves in their careers,” said Steve Jenkins, Montana LTAP Director. “They are the counties’ most valuable asset and this training provides the largest payback of money invested.” Twenty-nine were honored at the MACRS banquet with certificates and Roads Scholar jackets.

Pondera County highlighted the awards with all three county commissioners receiving Roads Scholar Level I. To further the program’s initial goal, many of those attaining a Roads Scholar status assist Jenkins at workshops sharing their knowledge with others. To learn more about Montana LTAP’s Roads Scholar Program, go to: [http://www.westerntransportationinstitute.org/centers/ltap/Resources/RoadsScholar](http://www.westerntransportationinstitute.org/centers/ltap/Resources/RoadsScholar).

“Be smart, be visible, and watch for road hazards” emphasizes MDT’s bicycle/ped safety website. [http://www.mdt.mt.gov/travinfo/bikeped/bikesafety.shtml](http://www.mdt.mt.gov/travinfo/bikeped/bikesafety.shtml). MDT has “Bikes on Roadway” signs available for any individual or group organizing an event to reserve and check out from the following MDT employees:

- John Maricelli, Missoula - 523.5836
- Elizabeth Hedstrom, Kalispell - 751.2015
- Randy Roth, Billings - 657.0217
- Kam Wrigg or Pat Kenney, Butte - 494.9600 or 494.9603
- Dave Hand, Great Falls - 454.9889
- Ray Stocks, Havre - 262.5504
- Doug Lutke, Lewistown - 538.1301
- Helen Osterman, Glendive - 345.8225
- Mark Keeffe, Helena - 444.9273

Summer 2011 Montana LTAP

2011 Montana Roads Scholars

1. Dave Amunrud, Park County
2. Sandra Broesder, Pondera County
3. Ovila Byrd, Flathead Lake County
4. Joe Christiaens, Pondera County
5. Hue Croy, Madison County
6. Jay Dixon, Park County
7. Mark Ebert, Lewis & Clark County
8. Skip Ehret, Park County
9. Curtis Gehrke, Missoula County
10. Dan Hackman, Park County
11. Dustin Hirschy, Beaverhead County
12. Cynthia Johnson, Pondera County
13. Johny Kinkelaar, Fergus County
14. Shawn LaDue, Missoula County
15. Dave Lassle, Prairie County
16. R.J. Lowder, Madison County
17. Roger Mallery, Sanders County
18. Jason Mann, Madison County
19. Lonnie Moyer, Lewis & Clark County
20. Keith Osborne, Richland County
21. Tim Paulson, Yellowstone County
22. Rick Reed, Sweet Grass County
23. Russ Sigman, Beaverhead County
24. Gary Stewart, Madison County
25. Edward Tinker, Lewis & Clark County
26. Greg Turley, Musselshell County
27. Jody Woods, Fergus County
28. John Young, Park County
29. Tod Zellmer, Lewis & Clark County

(22 of the 29 Roads Scholars who attended Spring MACRS 2011)

Ideas that Bridge Safety and Mobility for People and Wildlife

By Angela Kociolek, ARC Technology Transfer Leader, Western Transportation Institute

Sometimes a single person’s idea can turn into something big. At the Western Transportation Institute (WTI), engineers, ecologists, and planners tackle rural transportation issues and share ideas with agencies and practitioners in the field.

One such idea by Senior Road Ecology Researcher Dr. Tony Clevenger sparked the first ever competition of its kind—the ARC International Wildlife Crossing Infrastructure Design Competition (ARC).

Because people rely on highways and expect them to be safe, a huge challenge affecting roadway managers is the increase in wildlife–vehicle collisions that threaten human safety. Collisions with wildlife have increased by 50 percent in the last 15 years and cost our country $8 billion annually in damages and lost wildlife resources.1

Fortunately, effective mitigations exist such as wildlife crossing structures that span under or over the roadway so animals have no need to cross at-grade. Animals find these crossing opportunities over time because 8-ft-high fencing keeps them from entering the road elsewhere.

The fact that wildlife adapts to this type of infrastructure means that animals have continued access to the habitats they need for survival and genetic exchange between populations is possible. The measures also make highways safer for drivers.

But the price tags for these structures are in the millions, limiting the number that can be built. That’s what inspired Tony to challenge the world’s engineers, landscape architects, ecologists and designers to create the next generation of wildlife crossing structure that is both workable and cost effective. But the challenge didn’t end there. Wildlife–transportation conflicts are also exacerbated by a changing climate, which can alter vegetation patterns and species distributions as we know them. Continued on Page 9…
The jury succinctly encapsulated the excitement of the competition by declaring, “The winning proposal by HNTB Engineering with Michael Van Valkenburgh & Associates was not only eminently possible; it has the capacity to transform what we think of as possible.” That’s the challenge to every one of us no matter our role—to question what is possible.

The ARC competition is now over but the ARC Partnership continues to strive for the implementation of wildlife crossing infrastructure wherever it is needed to ensure the safety and mobility of humans and wildlife.

WTI coordinated the competition in 2010 with financial support from, and collaboration with, a strong and diverse partnership (http://www.arc-competition.com/partners.php).

Thirty-six design teams representing 100 firms and nine countries responded to the challenge. Designs by the five finalists are pictured here. You can learn more about them and their creators at: http://www.arc-competition.com/finalists.php.

The winning design of HNTB with Michael Van Valkenburgh & Associates (New York) employed “hypar modules that are optimized for being efficient to transport, erect, combine and recombine. No on-site concrete work is required, and bridges can be added to or removed as animal migration pressures shift over time.” Each rib-like unit is a hypar module that, when paired, forms the arch for vehicles to travel under.

“The crossing structures of today are built of concrete and steel,” said Tony “The possibilities for lighter, more durable, mobile and less expensive structures exist; the ARC competition encourages innovative thinking out of the box.”

Have you ever seen a work crew pouring concrete and heard someone yell, “Oh no! We’re going to need more concrete!” Or, have you ever watched as concrete is poured level with the top of the forms and then the concrete truck driver says, “Well, that is the last of them. What do you want me to do with the three yards of concrete left in my truck?”

Using concrete doesn’t have to be that way. Roadway agency employees can determine the appropriate amount of concrete needed for any type of project once they learn how to calculate amounts using some simple math formulas.

UNDERSTANDING THE MATH
To start, let’s review some basic math.

Convert to common units — To begin, you must convert all measurements into common units (such as inches, feet, yards, etc). How would you multiply 11 feet times 6 inches, for example? You would convert either the 11 feet into inches or the 6 inches into a decimal part of a foot.

Inches into feet — Converting the 6 inches into a decimal part of a foot is the preferred choice since in our English system of measurement, the “foot” is the base unit. This system then divides feet into smaller units (inches, fractions) or multiple units of a foot (yards, miles).

How do you convert 6 inches into feet? There are 12 inches in 1 foot. If you take the number of measured inches (6) and divide it by the number of inches in a foot (12), you will have the measurement expressed in feet (in decimal form). In our example: 6 ÷ 12 = 0.50 feet.

Using this conversion formula in another example, you would change 7 inches into feet by taking the number of inches (7) and dividing it by 12 to get 0.583333 feet, which you can round to 0.58 feet.

Fractions into decimals — But, what do you do if your measurement is in fractions of an inch? Since you are changing the inches into decimal numbers, you will need to change the fractions into decimals. To do this, simply take the top number in the fraction and divide it by the bottom number. For the fraction \( \frac{1}{2} \), for example, you would divide the top number \( 1 \) by the bottom number \( 2 \) to get \( 0.5 \). For the fraction \( \frac{3}{8} \), divide 3 by 8 to get 0.375, which you can round to 0.38. For \( \frac{5}{4} \), you would divide 1 by 4 to get 0.25. Then you would add it to 5; therefore it would be 5.25. With all the numbers now in decimal form, you can proceed with converting inches into feet.

APPLYING THE CALCULATIONS
Use the formula — Once you have all the measurements converted into like units (feet) in decimal form, you are ready to apply some calculations to your measurements. Calculating quantities for concrete can be obtained by using three dimensions:

Length (L) times Width (W) times Height (H) or L x W x H.

If you are using feet as your standard unit of measurement, this formula will give you the volume of concrete in cubic feet.

Most projects use standard-dimension lumber for forms: 2-by-4s or 2-by-6s. A 2-by-4 is actually 3½ inches wide and a 2-by-6 is 5½ inches wide. That’s important to know when you begin your calculations.

**Sidewalk Project Example**

You are pouring a sidewalk 4 feet wide by 125 feet long and using 2-by-4s for forms. To calculate the quantity of concrete needed for this project, you will use the formula L x W x H to get cubic feet.

Convert to common units.

Before you can calculate this quantity, you have to convert the 3½ inches into feet. To do that, first change the fraction \( \frac{3}{2} \) into a decimal \((1 \div 2 = 0.5)\) and add this to the 3 inches to get 3.5. Next, divide the 3.5 inches by 12 to change it into feet: 3.5 ÷ 12 = 0.291666 feet, which you can round to 0.29 feet.

**CONVERT CUBIC FEET INTO CUBIC YARDS**

Ready-mix concrete is measured in cubic yards. You will need to convert your cubic-foot measurement to cubic yards. (Remember 3 feet = 1 yard.)

Using the formula L x W x H, we know that there are 27 cubic feet in a cubic yard (3 feet x 3 feet x 3 feet = 27 cubic feet). Our sidewalk project example requires 145 cubic feet of concrete. To convert to cubic yards, divide 145 by 27, which equals 5.37 cubic yards (145 ÷ 27 = 5.37).

Since concrete is usually ordered to the nearest \( \frac{1}{4} \) to \( \frac{1}{2} \) cubic yard (0.25 to 0.50 cubic yard), you would round the 5.37 to 5.50 cubic yards. By ordering this amount of concrete for your sidewalk project, you are guaranteeing that you will neither run short nor have too much excess concrete. Learning how to calculate the quantity of concrete needed for a project will help save you time, money, materials, and aggravation.

---

Roadside Revegetation Website

A recently launched website: www.nativerevegetation.org is available with information about using native plants to revegetate roadsides after construction. The website is divided into three main sections: Learn, Train, and Visualize. Modules within these sections include relevant links to other websites for additional information. The Visualize section uses interactive features to show how different variables can influence the effectiveness of site revegetation.
**New Publications**

**p-7 Geosynthetic Reinforced Soil Integrated Bridge System Interim Implementation Guide (FHWA 2011)** This manual outlines the state-of-the-art and recommended practice for designing and constructing Geosynthetic Reinforced Soil (GRS) technology for the application of the Integrated Bridge System (IBS). The procedures presented in this manual are based on 40 years of State and Federal research focused on GRS technology as applied to abutments and walls. (169 pages) The second part of this series (p-8) is a synthesis report that covers the background of GRS-IBS and provides other supporting information to substantiate the design method. (169 pages)

**p-8 Geosynthetic Reinforced Soil Integrated Bridge System Synthesis Report (FHWA 2011)** This report is the second in a two-part series to provide engineers with the necessary background knowledge of Geosynthetic Reinforced Soil (GRS) technology and its fundamental characteristics as an alternative to other construction methods. (64 pages)

**p-294 Road Safety Assessment: Amsterdam Road/I-90 EB On-ramp (MDT October 2010)** The overall purpose of this RSA was to determine if an additional on-ramp to the Interstate would potentially degrade safety with the two existing on-ramps. Additionally, the RSA explored several potential design options and their respective safety and operational impacts. (48 pages)

**p-379 Modeling of Hot-Mix Asphalt Compaction: A Thermodynamics-Based Compressible Viscoelastic Model (FHWA 2010)** This study was conducted to develop a model within the context of a thermomechanical framework for the compaction of asphalt mixtures. The developed model is a useful tool for simulating the compaction of asphalt mixtures under laboratory and field conditions. (110 pages)

**p-523 Current and Innovative Solutions to Roadside Revegetation Using Native Plants – A Domestic Scan Report (FHWA January 2011)** The use of native plants in roadside revegetation has evolved as more and more resource management agencies prescribe the practice as a much better approach for ecosystem. A domestic scan was initiated by the Federal Highway Administration to facilitate understanding about the processes and techniques used in successful and innovative projects that used native plants for roadside revegetation. (72 pages)

**p-882 Intersection Safety: A Manual for Local Road Owners (FHWA 2011)** This document provides information on

---

**New Publications (Cont’d)**

**p-883 Roadway Departure Safety: A Manual for Local Road Owners (FHWA 2011)** This document provides information on effectively identifying roadway departure safety issues in local areas, choosing the countermeasures that address them, and evaluating the benefits of those treatments. (68 pages)

**p-884 Road Safety Information Analysis: A Manual for Local Road Owners (FHWA 2011)** This CD contains 9 powerpoint modules, pdf Participant Workbook, and their respective safety and operational impacts. (46 pages)

**New DVD’s**

**DVD 530 Successful Roadside Revegetation Using Native Plants (FHWA 2011)** The use of native plants in roadside revegetation has evolved as a much better approach for the ecosystem. This DVD documents the processes and techniques used in successful and innovative projects that used native plants for roadside revegetation. Host project sites included Arizona, New York, Oregon, and Montana. (24 min)

**DVD 2530 International Wildlife Crossing Infrastructure Design Competition (WTI November 2010)** ARC engaged the best and most innovative international, interdisciplinary design teams—comprised of landscape architects, architects, engineers, ecologists, and other experts—to create the next generation of wildlife crossing structures for North America’s roadways. The ARC competition short-listed five, world-class, interdisciplinary teams to develop concept designs for a wildlife crossing structure at Colorado’s West Vail Pass along I-70. The finalists’ designs can be seen on this video. (12 min)

**New CD’s**

**SW857 Road Safety 365: a Safety Workshop for Local Governments (FHWA October 2010)** This Workshop contains 9 powerpoint modules, pdf Participant Workbook and two video clips illustrating how we can all be part of the safety solution.

**SW882** (1) Intersection Safety: A Manual for Local Road Owners (FHWA 2011) 60 pages; (2) Roadway Departure Safety: A Manual for Local Road Owners (FHWA 2011) 68 pages; (3) Road Safety Information Analysis: A Manual for Local Road Owners (FHWA 2011) 46 pages This CD contains three manuals. (See above publications p-882, p-883, p-884 for descriptions.)

**Welcome to the LTAP Lending Library where publications, videos, DVD’s, and software may be borrowed for a two-week period. We have a limit of three videotapes or DVD’s for a rent-free two-week period. Some publications are free or for a nominal charge upon request.**

For information or checkout procedures, please call Genevieve Albert or Michele Beck, LTAP, 1-800-541-6671. If you have computer access, please e-mail us: mttap(at)coe.montana.edu.

We have new lists for the library publications, software, DVD’s, and videos at our new web site: http://www.westerntransportationinstitute.org/centers/ltap/Resources

At this web site, you can also keep track of upcoming workshops, past and present newsletters, and workshop announcements. Our 2011 Needs Assessment Survey is available at this web site. Thank you in advance for taking time to complete it.

**Summer 2011 Montana LTAP**
LTAP MATTERS is published quarterly. Funding for this program is provided by the Federal Highway Administration, Montana Department of Transportation, Montana State University, and a portion of Montana’s gas tax revenues.

This newsletter is designed to keep you informed about new publications, techniques, and new training opportunities for you and your community.

Present and past issues are available at http://www.westerntransportationinstitute.org/centers/ltap/Newsletter or by calling 1-800-541-6671.

Approximately 800 copies of this public document were published at an estimated cost of $2.06 per copy for a total cost of $1,648.41 which includes $1,210.51 for printing and $437.90 for distribution.

LTAP attempts to provide accommodations for any known disability that may interfere with a person participating in any service, program or activity. Alternative accessible formats of this document will be provided upon request.

Please send us any comments or concerns you may have regarding this newsletter with your name and address in order that we may respond in a timely manner.

Editorial Contributions Welcome
LTAP welcomes contributions to LTAP MATTERS. Those wishing to submit relevant material to be published in the next newsletter can submit their ideas and articles to:
