Modular Tooling Kits for M&IE Laboratory

In this project, the team will identify and develop modular tooling kits for use with the conventional mills, the drill press, CNC mills, the CMM, and the Optical Comparator. They would be similar in concept to the modular tooling available from Carr-Lane: https://www.carrlane.com/en-us/product/modular-fixturing/mini-system-mf25-5-16, but much less expensive. The project results will be targeted to our manufacturing lab, it’s equipment, and laboratory educational exercises.
