What inspires and motivates you?
We believe our responsibility as engineers is to ensure social justice for all people inside the systems we design and manage. To do this, we must be vigilant and examine all systems in our society (business, education, transportation, healthcare, etc.)

Our graduate program in Industrial and Management Systems Engineering (IMSE) combines advanced analysis and modeling tools with relevant human factors and management science that enable our graduates to become effective engineers and ethical leaders.

Our program involves community-based service projects that address complex social justice issues. Student can choose their elective interdisciplinary courses, so they can design a program of study that is relevant to the communities and cultures that are most important to them.
