

# GRADUATE PROGRAM:

INDUSTRIAL AND MANAGEMENT SYSTEMS ENGINEERING  
MONTANA STATE UNIVERSITY

## CAN YOU ENGINEER A JUST WORLD?

Our innovative graduate program equips students from all backgrounds with skills to analyze, design and manage complex human-centered systems. Systems-change is necessary in all areas of human activity – business, social services, government, security - to create a just world. Industrial and Management Systems Engineering combines advanced analytical and modeling tools with cutting edge human factors and management science to give our graduates a unique edge in meeting their goals of ethical leadership and high-impact engineering. The graduate program integrates project-based learning with internships in communities and organizations that address complex social, environmental, and economic issues. With the flexibility to choose elective courses from a range of disciplines students can explore areas that interest them most while pursuing critical areas of impact.
