### Job Description:

**JOB PURPOSE**
Guide, implement, and improve company processes, products, and services to promote consistency, standardization, efficiency, and high-quality outputs that meet customer requirements. Act as the Management Representative in all quality matters.

**JOB DUTIES/RESPONSIBILITIES**

- Coordinate quality and efficiency related training for staff and management.
- Guide Inspectors; ensure the quality of manufactured goods and services meet customer expectations.
- Quickly and effectively take action when non-conformances are found.
- Lead root cause analysis and preventive action efforts to improve overall company objectives.
- Analyze quality data and present findings and recommendations to management for continuous quality improvement.
- Lead development, implementation and adherence to the quality management system. Develop and/or review standards, policies, and procedures.
- Review and resolve quality control problems/concerns with management and personnel related to production.
- Schedule and perform internal quality audits and report findings to management.
- Develop corrective action plans and oversee timely resolution; review corrective actions with appropriate personnel.
- Prepare reports and other documentation required by regulatory agencies to support the quality assurance function.
- Review and oversee implementation of document and record controls.
- Supervise tagging and quarantine procedures for non-conforming items. Authorize rework, scrap or return to vendor decisions; consult and review with VP level management as necessary.
- Track and respond to customer feedback, as appropriate.
- Support production processes through utilizing lean and manufacturing engineering principles.
- Actively seek ways to increase company profit through continuous improvement.
- Exemplify the company’s core values.
QUALIFICATIONS AND EDUCATION REQUIREMENTS

B.S. in Engineering discipline, 2+ years related experience (desired)
Certification of Engineer in Training or Professional Engineer licensure (desired)

PREFERRED SKILLS

Experience in managing and overseeing Quality Management Systems (ISO9001 or AS9100 familiarity preferred)
Competent in Microsoft Office
Experience writing technical reports
Great attention to detail and time management skills
Self-motivated with work ethic; strong oral and written communication skills
Team worker promoting “one company” across manufacturing and administrative departments
Familiar with project management tools (Microsoft Office, Project)

ABOUT KENNON

Kennon Products is a multi-faceted company with a reputation built on quality and service. Kennon has designed and manufactured quality items protecting high value assets, using advanced industrial fabrics and composites, for over thirty years. Kennon was founded in 1984, built on the design and manufacture of high quality general aviation products. Kennon’s initial success led to growth and the ability to supply diverse product lines designed to preserve aircraft integrity for general aviation, military, and commercial aircraft of all types.

To this day, Kennon takes great pride in providing products of superior design, material, and performance to aircraft owners and users internationally and to the United States Military. In pursuit of preserving and protecting high value assets within the aviation industry and beyond, Kennon acquired material specialists, engineers, designers, and former-military aviation experts to complement the long-established technology and expertise of Kennon industrial sewing machine operators, support and production personnel. Product lines and staffing have continued expanding to also include items and expertise in healthcare (such as Ligature Resistant Doors), oil and gas (Rodent-proof Insulating Wellhead Covers), and marketing (full-service graphic designs and prints) industries, as well as products/technology generated by Small Business Innovative Research grants.

Kennon’s success and progress is based on innovation, dedication, and the desire to provide the best quality products - protecting what is important to Kennon customers. Kennon continues to demonstrate a commitment to the research, development, design, production, and supply of quality items protecting high value assets.
