HOW SOFT SKILLS DRIVE HIGH-PERFORMANCE

Soft skills are qualities and attributes necessary for success in any profession. They include communication skills, decision making & problem-solving skills, self-management, and teamwork.

A recent study from Boston College, Harvard University, and the University of Michigan found that training in soft skills boosts productivity and retention 12 percent, and delivers up to a 250 percent return on investment.

You’ve adopted the latest technologies, Key Performance Indicators, and quantification metrics – yet your bottom line still isn’t moving. Unfortunately, these traditional methods do not get companies over the major hurdles they face. So where do you start? Join us for this dynamic, interactive workshop aimed at teaching leaders and managers collaborative tools that drive high performance – tools you can take with you and use to improve engagement and your bottom line.

Participants will receive a hard copy of The Authority Guide to Developing High-Performance Teams and earn 6.0 PDH’s.

This seminar is designed for leaders, managers, HR personnel and Learning & Development professionals.

Discover why you can’t ignore the “soft stuff” anymore...
