N437  Psychiatric Nursing
Credits:  6; (3 lecture, 3 clinical lab)
Semesters Offered:  F, S
Prerequisites:  N342 and N377
Corequisites:  N348 or N349 or N354

Course Description:  The focus of this course is nursing care of clients with acute and chronic psychiatric disorders, including psychopathology associated with major mental illness. Community based experiences provide opportunity for continued development of therapeutic skills. Social, cultural, spiritual, and environmental issues influencing mental health are explored.

Course Objectives:
1. Utilize evidence based nursing practice in planning and managing the care of clients of a variety of ages with psychological, emotional and/or biophysical disorders
2. Assess the functioning of selected groups using theories of group dynamics.
3. Utilize knowledge of the dynamics of families, groups, and communities as they relate to mental wellness and mental illness in the care of selected clients.
4. Examine the effect of behaviors, values, attitudes, and feelings on the nurse-patient relationship.
5. Demonstrate skill in functioning as a responsible member of a mental health care team.
6. Discuss the significant legal processes that affect the rights of mentally ill clients.
7. Discuss the social, cultural, spiritual, and environmental issues which influence the present health care delivery system for the mentally ill.
8. Demonstrate professional behavior.
9. Communicate effectively with clients, families, and professionals.
10. Demonstrate responsibility and accountability reflecting professional values.

Recommended Content and Concepts:
A. Mental Health and Illness: Acute and Chronic; Preventive Concepts; Complimentary Therapies
B. Theories: developmental, psychodynamic, psychobiological, social-interpersonal, behavioral, group process
