TEST INSTRUCTIONS (PLEASE READ CAREFULLY!)

A Fire Fighter 2 Candidate has an **18 month period** to complete this test. Once the FSTS administered portion of the test has begun, it must be completed **within 9 months**. This period begins with the first test date entered and ends with the last test date a skill was demonstrated and recorded. **Notification:** When testing is planned or scheduled, contact your local FSTS Field Trainer and give notice of the dates, times, and location of the testing. Occasionally, the FSTS Field Trainer is required to observe local testing to ensure compliance with accreditation and certification rules. Reference materials from any source may be used by the Candidate to complete the locally administered, open resource portions of the testing process. The (FSTS) Fire Fighter II Coaching Package is a vital training tool for instructors teaching the tactical skills listed inside the rear cover. Other resources are listed after some test elements and are available from the FSTS Resource Center.

The Chief Officer (CEO) of your Fire Service Organization **must** sign off in the signature block under "Fitness Requirements" and “Facilities and Equipment Compliance” **before any testing begins.** An FSTS authorized test administrator, a certified instructor or Chief Officer of the Department who has a Proctor's Affidavit on file with the FSTS must sign off each signature block and enter the date after witnessing your completion of each element. Every signature block must be signed and dated. The individual who conducts the test for an element and signs off a block, **must be someone other than the**
instructor the Candidate was trained and learned the skill from. Original signatures are required. The reference source cited after each element is the authoritative source for satisfactory performance. **Safety** - All of the performance elements/objectives shall be performed swiftly, safely, and with competence. Each element/objective shall be demonstrated in its entirety.

**Fitness Requirements**
The signature of the Chief of the Fire Service Organization is evidence to FSTS that the candidate has met local requirements with regard to good physical and mental condition and has a background indicating good moral character. The local chief should ensure that the candidate has an appropriate background and physical and mental condition prior to beginning this test. NFPA 1582 (*Medical Requirements for Fire Fighters*) is recommended for use by local authorities in assessing the physical and medical evaluation of candidates.

Chief Officer’s Signature ___________________________ Date ___________________________

**Facilities and Equipment Compliance:**
The signature of the chief of the Fire Service Organization is evidence to FSTS that the facilities and equipment used for testing are in compliance with applicable NFPA Standards.

Chief Officer’s Signature ___________________________ Date ___________________________

**Signature Verification:**
For the purpose of signature verification to sign off in this test booklet I certify my signature as:

**6.3.1** Extinguish an ignitable liquid fire, operating as a member of a team, given an assignment, an 
attack line, personal protective equipment, a foam proportioning device, a nozzle, foam 
concentrates, and a water supply, so that the correct type of foam concentrate is selected for the 
given fuel and conditions, a properly proportioned foam stream is applied to the surface of the 
fuel to create and maintain a foam blanket, fire is extinguished, reignition is prevented, team 
protection is maintained with a foam stream, and the hazard is faced until retreat to safe haven is 
reached.

The candidate has demonstrated extinguishment of an ignitable liquid fire, operating as a member of a 
team, given an assignment, an attack line, personal protective equipment, a foam proportioning device, a 
nozzle, foam concentrates, and a water supply, so that the proper type of foam concentrate is selected for 
the given fuel and conditions, a properly proportioned foam stream is applied to the surface of the
