Using an eco-evolutionary approach to inform conservation and restoration of Chinook salmon

Neil Thompson is a California Delta Science Program Post-Doctoral Fellow working with the Molecular Ecology team at the NOAA Southwest Fisheries Science Center in Santa Cruz, CA. His work focuses on identifying the fitness consequences that releasing hatchery-reared fish can have on natural populations of endangered winter-run Chinook salmon in California's Sacramento River as well as taking a molecular approach to explore the expression of spring- and fall-run ecotypes
