DARCY LECTURE EVENT
Montana State University and the Energy Research Institute are hosting the 2015 Darcy Lecturer

Rainer Helmig

Title: Evaluating the Competitive Use of the Subsurface: The Influence of Energy Storage and Production in Groundwater

Date: June 4, 2015
Location: Byker Auditorium, Room 3, Chemistry and Biochemistry Building

The program begins with talks by ERI researchers investigating subsurface energy topics.

Program:
1:30 Matthew Fields. Microbially Enhanced Coal Bed Methane Production
1:55 Adie Phillips. Advanced Technology for Mitigating Subsurface Gas Leakage
2:20 Lee Spangler. The Kevin Dome Carbon Sequestration Project
2:45 Short Break
3:00 Rainer Helmig. Evaluating the Competitive Use of the Subsurface: The Influence of Energy Storage and Production in Groundwater

Abstract. The subsurface is being increasingly utilized both as a resource and as an energy and waste repository. With increasing exploitation, resource conflicts are becoming increasingly common and complex, such as thermal energy storage and the effects surrounding hydraulic fracturing in both geothermal and shale gas production.

Rainer H. Helmig

Rainer H. Helmig, Ph.D., is head of the Department of Hydromechanics and Modelling of Hydrosystems at the Institute for Modelling Hydraulic and Environmental Systems, University of Stuttgart, Germany. His research covers fundamental research and applied science in the field of porous-media flow. A major focus is on developing methods for coupling hydrosystem compartments and complex flow and transport processes. This is based on simulation methods and techniques for describing single- and multiphase, multicomponent flow and transport processes in the subsurface, i.e., in porous and fractured-porous media.
