To End Hunger, Empower Women

Bread of the World Institute | READ STORY

A new report titled <u>When Women Flourish...We Can End</u> <u>Hunger</u> by the Bread of the World Institute shows that discrimination against women is a major cause of persistent hunger and that increasing women's earning potential by boosting bargaining power, reducing gender inequality in unpaid work, increasing women's political representation, and eliminating the wage gap between male and female labor could help stem the worldwide epidemic. doing community

development work.'....Doing high-quality community development work requires individuals with sound training in the field of community development, applied social sciences, or other closely related fields. CD is no less complex than the work one would expect from an Extension educator with a specialization in agronomy, animal science, or nutrition." Kudos, Bo and Sam!

Where Are the Hardest Places to Live in the U.S.?

Times Magazine | READ STORY

Annie Lowrey <u>writes</u> in the NY Times Magazine about several measures for the hardest place in America to live. The conclusions are drawn by looking at six data points for each county in the United States: education (percentage of residents with at least a bachelor's degree), median household income, unemployment rate, disability rate, life expectancy and obesity. Each county's relative rank are then averaged in these categories to create an overall ranking.

A Nationwide Evaluation of Municipal Law

HRC| READ STORY

A new report called the <u>Municipality Equality</u> <u>Index</u> produced by the <u>Human Rights Campaign</u>, examines the laws, policies, and services of municipalities and rates them on the basis of their inclusivity of LGBT people who live and work there. Ratings are based on 6 different areas: nondiscrimination laws; relationship recognition; how the city treats its own employees; city services; law enforcement; city leadership on matters of equality. Deadline: Ongoing Funder: CHS Foundation

CAIT Equity Explorer

World Resources Institute | READ STORY

Finalizing an "ambitious and equitable" international climate agreement by 2015 is a key step in transitioning the world to a low-carbon economy and building resilience. Figuring out what that kind of agreement looks like, though, can be difficult - especially when it comes to the equity component. So, how should countries decide what to put into their contributions, and how should they be evaluated? What should governments, civil society, and the private sector take into account in thinking about the equitability of a country's actions? World Resource Institute's new online tool, the CAIT Equity Explorer, aims to help answer these questions. A related interactive visualization based on data from WRI's CAIT and the IPCC, shows how national CO2 emissions have changed over the last 150 years, how much of the global carbon budget these emissions have used up, and what the future might hold.
