

Beef Carcass Grading Basics and 2018 Steer of Merit Program

Megan Van Emon, Beef Cattle Specialist (406) 874-8286, megan.vanemon@montana.edu

Common Carcass Grading Terms and Definitions:

- Live weight: how much the steer weighed (in pounds) at the fair
- Hot carcass weight (HCW): how much the carcass weighed (in pounds) after harvest
- Dressing percentage (DP): hot carcass weight divided by live weight, expressed as a percent. DP = (HCW ÷ LW) × 100%
- **Backfat**: external fat thickness (in inches) measured at the 12th rib, ³/₄ of the length of the ribeye from the spine
- Kidney, pelvic and heart (KPH) fat: estimate of the amount of kidney, pelvic and heart fat as a percentage of carcass weight
- Ribeye area (REA): area of the ribeye muscle (in square inches) measured at the 12th rib
- Ribeye area per hundred-weight (REA/CWT): ribeye area divided by hot carcass weight expressed as hundred-weight. REA/CWT = REA ÷ (HCW ÷ 100)
- Yield grade (YG): equation based on balance between muscle and fat; ranges from 1 to 5
 - YG = 2.5 + (2.5 × backfat) + (0.2 × KPH fat) + (0.0038 × HCW) (0.32 × REA)
- Maturity: classification of the age of the carcass; ranges from "A" (youngest) to "E" (oldest). 4-H and FFA carcasses shouldn't be older than "A"
- **Dark cutter**: beef exhibits a dark, purplish red to almost black lean color compared to a normal cherry red. This results from stress prior to slaughter and is a result of high muscle pH.
- **Marbling score**: numerical value representing the amount of intramuscular fat in the ribeye
- **Quality grade**: based on maturity and marbling; reflects flavor and tenderness of the beef. See Table 1.
- **Cutability**: equation similar to yield grade that estimates boneless, closely-trimmed retail cuts from a beef carcass
 - Cutability = 51.34 (5.78 × BF) (0.462 × KPH) (0.0093 × HCW) + (0.74 × REA)

Quality Grade	Marbling Calls	Marbling Score
Prime+	Abundant	900-999
Prime0	Moderately Abundant	800-899
Prime-	Slightly Abundant	700-799
Choice+	Moderate	600-699
Choice0	Modest	500-599
Choice-	Small	400-499
Select+	Slight	350-399
Select-	Slight	300-349
Standard+	Traces	200-299
Standard-	Practically Devoid	100-199

Table 1. Quality grades, marbling calls, and marbling scores for "A" maturity carcasses.

MSU Extension is an ADA/EO/AA/Veteran's Preference Employer & Provider of Educational Outreach.

Range/Standard 650 – 950 pounds
650 - 950 nounds
000 – 300 pourius
55 – 68%
0.25 – 0.60 inches
11.5 - 17.5 square inches
≤ 2.99
No
Choice ⁻ or better
≥ 51%

After evaluation, carcasses are ranked by sorting the data in three steps:

- 1. Steer of Merit (Yes or No)
- 2. Price per hundred-weight (highest to lowest)

EXTENSION

3. Cutability (highest to lowest)

In the Ultrasound Division, we assume a 62% dressing percentage, 2% kidney, pelvic, and heart fat, and no dark cutters.

Carcasses are priced based on a grid formulated from USDA data the third week of June each year. Grid prices for 2018 are listed below.

2018 SOM Carcass Pricing		
Base Price	\$173.21/cwt	
YG 1	\$3.86	
YG 2	\$1.82	
YG 3	\$0.00	
YG 4	(\$11.07)	
YG 5	(\$17.43)	
Prime	\$12.23	
Ch+/Ch ⁰	\$4.11	
Ch-	\$0.00	
Select	(\$17.67)	
Standard	(\$30.86)	
Dark Cutter	(\$35.42)	

For example, a yield grade 3, Choice⁺ carcass would be priced at \$177.32/cwt (\$173.21 + \$0.00 + \$4.11). Whereas, a yield grade 2, select carcass would be priced at \$157.36/cwt (\$173.21 + 1.82 - \$17.67).
