

MCPs Agriculture Education

History

Agriculture
Education taught
in Missoula County
Public Schools for
more than 70
years.

- 100 Acres
- State Inspected Meat Lab
- Classroom building
- Metal shop
- Life lab
- Animal Science barn
- Hay barn
- Wood Shop
- 60 Acres of hay land
- 35 Acres of pasture

**Meat
Processing
Facility
Opened in
Spring of
2019**

Mission:

**Create
Informed
Consumers
From
Conception to
Consumption**

Veterinary Science

Animal Care and Handling

Feed and Nutrition

Max Andres pushes a portion of the steer's carcass into a cooler where it chills for at least 48 hours before it can be processed further. The cooler, which hovers around 34 degrees, inhibits bacteria growth and makes the meat easier to cut.

Our school is the largest pork producer in Missoula County- producing about 35,000 pounds of pork annually for our community.

An aerial photograph of a lush green field, likely a pasture. A single vertical fence line, consisting of a wire with metal posts, runs down the center of the image. The grass is vibrant green and appears to be well-maintained.

The Ag Center provides much of the ground beef for our school's lunch program from local, grass fed cull cows.

This year we are perfecting an all-beef hotdog that will be added to the lunch menu
