1. **Temporary Roofing System** - Use a temporary roofing system that is compatible with the permanent roofing system to prevent damage during installation. This system should be removed once the permanent system is in place.

2. **BASE SHEET** - Install a base sheet to provide a waterproof barrier and a smooth surface for the permanent roofing system.

3. **INSULATION** - Use a layer of insulation to provide thermal protection and increase the energy efficiency of the building.

4. **COVER BOARD** - Apply a cover board over the insulation to provide additional waterproofing and a surface for the roofing membrane.
